Description

Typhoon Blast™ and Typhoon Surge™ are the newest class of dusters from Chemtronics, specifically formulated to minimize the use of global warming compounds. They are formulated with HFO-1234ze, a new material that has a significantly lower global warming potential (GWP) than previous materials used for dusters. This new material has a GWP of less than 1, and compares very favorably to HFC-134a (GWP of 1300) and HFC-152a (GWP of 140). In addition, since it has a short atmospheric lifetime with a very low photochemical ozone creation potential, it is not expected to be classified as a VOC.

Chemicals: Typhoon Blast 70 Duster

NOTE TO VISITORS FROM FREEBIE WEBSITE, E-MAIL OR POSTING:

A website that specializes in free offers and coupons included our duster product without our permission. We can't honor their offer, so we won't be sending out free duster. We only offer samples to industrial customers for evaluation.

FEATURES & BENEFITS

- Ultra-low Global Warming Potential (GWP)
- High powered cleaning strength
- Nonflammable
- Zero VOC
- Safe on plastics
- Filtered to 0.2 microns
- Leaves no residue
- 100% HFO-1234ze
- Safe on plastics

APPLICATIONS

- Removing dust build up from circuit boards
- Cleaning insulating debris from pin connectors
- Removal of entrapped solvent from under surface mount devices
