Description

The control unit eco-CONTROL EC200-DUO has been developed and tested for accurate work with the preflow high-precision, volumetric, 2 component dispensers. The control unit has a variety of configuration options to dispensing quantity, mixing ratio and dispensing time.

All production-related values can be stored and changed at any time. The operation takes place over an intuitive user guidance using a graphical user interface. An integrated pressure control ensures the optimum process safety of the system. There is also the possibility of data exchange with a USB interface.
