Description

The preflow eco-DUO330 is a rotating, perfectly pressure-tight, two component dispensing system with self-sealing rotor-stator arrangement. Conveyance action by material displacement in the stator through controlled rotor movement. Safe conveyance without any modification to the material. With its suck back option, the mixing dispenser ensures a clean and controlled material cut-off while preventing post-dripping effects.

Smallest dispensing quantity: 0.005 ml
Adjustable dosing flow: 0.1 – 6.6 ml/min
Weight: approx. 1,100 g
