Description

The eco-PEN700 3D is a rotating and perfectly pressure-tight, solder paste dispenser, for example. With a self-sealing rotor/stator design. Conveyance action by material displacement in the stator through controlled rotor rotation. Safe conveyance without any modification of the dosing material. And the dispenser has another advantage: With its suck back option, preeflow ensures clean and controlled material thread-break while preventing post-dripping effects.

Smallest dispensing quantity: 0.060 ml
Adjustable dispensing flow: 5.30 – 60.0 ml/min
Weight: 750 g
