Description

The preflow eco-PEN300 is a rotating and perfectly pressure-tight displacement system. The dispenser comprises of a self-sealing rotor and stator. Conveyance action by material displacement in the stator through controlled rotor rotation. Safe conveyance without any modification of the dosing material. With its suck back option, preflow ensures clean and controlled material or medium cut-off while preventing post-dripping effects.

Smallest dispensing quantity: 0.001 ml
Adjustable dispensing flow: 0.12 – 1.48 ml/min
Weight: 380 g
