Description

A and B components are separately ported through the high flow manual valve without combining until they meet inside the static mixer, letting users handle high-viscosity fluids with ease. The maximum operating pressure is 600 psi (40 bar).

Compatible Mixers

- Series 162A-616
- Series 162A-623
- Series 162A-632
- Series 162A-639
